

MRL Custom Lens Installation

The AWS Mission Resilience Custom Lens (MRL) is a JSON file that can be obtained from AWS Samples or your AWS Account Team. To use the MRL:

1. Access the AWS Well-Architected Tool console and navigate to the "Custom lenses" section.
2. Select "Create custom lens" or "Import lens" to upload the MRL JSON file.
3. Review the imported lens content and make any necessary adjustments.
4. Publish the lens to make it available for use in workload reviews.
5. Navigate to the desired workload, select "View details," and choose the MRL from the "Custom lenses" option.
6. Use the MRL to conduct architecture reviews that incorporate architecture questions and best practices tailored around mission resilience.

For more information on AWS Well-Architected Lenses, refer to the AWS Well-Architected documentation.
